1. Introduction

FraudShield AI is an advanced mobile application designed to protect Pakistani banking users from financial fraud, phishing attacks, and cyber scams. The app uses Artificial Intelligence powered by OpenAI to analyze SMS messages and URLs in real time, providing instant verdicts in both English and Urdu.

Key Features:

■	Home Dashboard	Security score, alerts, and quick action buttons
■	SMS Scanner	AI-powered detection of phishing and scam messages
■	Link Checker	Real-time URL analysis for malware and phishing sites
■	Secure Vault	Biometric-protected storage for sensitive credentials
■	Emergency Freeze	Instantly block all financial activity when fraud is suspected
■	Settings	Customize protection, security, and language preferences

2. Installation Guide

System Requirements:

Operating System	Android 8.0 (Oreo) or higher
Storage Space	Minimum 150 MB free space
RAM	Minimum 2 GB RAM
Internet	Required for AI-powered analysis
Permissions	SMS, Notifications, Internet

Installation Steps:

Step 1	Download APK Download the FraudShieldAI.apk file from the apk/ folder in the GitHub repository.
--------	---

Step 2	Allow Unknown Sources Go to Settings > Security > Install Unknown Apps and allow your browser or file manager to install APK files.
Step 3	Install APK Open the downloaded APK file and tap "Install". Wait for installation to complete.
Step 4	Grant Permissions When prompted, allow SMS, Notification, and Internet permissions for full functionality.
Step 5	Launch App Tap the FraudShield AI icon on your home screen to open the app.

3. Getting Started

When you first open FraudShield AI, the app will request necessary permissions. Grant all permissions for the best experience. The app will load the Home Dashboard showing your current Security Score.

First Launch Checklist:

- Allow SMS permission — required for SMS scanning
- Allow Notification permission — required for fraud alerts
- Allow Internet access — required for AI analysis
- Set up Vault PIN — for securing your credentials
- Enable Biometric Lock (optional) — for Face ID / Fingerprint access

4. Home Dashboard

The Home Dashboard is the main screen of FraudShield AI. It shows your overall security health at a glance.

Dashboard Elements:

- **Security Score Ring:** A circular gauge showing your score from 0-100. Green = Safe, Yellow = Caution, Red = Danger.
- **Score (54/100):** Your current security score based on recent activity and threat detections.
- **Alerts Counter:** Number of unresolved security alerts that need your attention.
- **Activity Count:** Total number of scans and checks performed recently.
- **Protection Status:** Shows ON/OFF status of background fraud monitoring.
- **Suspicious Transactions:** Alert banner showing any suspicious financial activity detected.
- **Quick Actions:** 4 shortcut buttons: Scan SMS, Check Link, Open Vault, Emergency Freeze.

5. SMS Scanner

The SMS Scanner analyzes your messages to detect phishing attempts, scam messages, and fraud attempts. It classifies each message into three categories.

Message Categories:

Category	Color	Meaning
SAFE	Green	Message is legitimate and safe
SUSPICIOUS	Yellow	Message shows some warning signs — proceed with caution

DANGEROUS	Red	Message is a confirmed phishing or scam attempt — do not respond
------------------	-----	--

How to Scan an SMS:

- 1. Tap "SMS" in the bottom navigation bar.
- 2. Tap "+ Add real message" to paste a message manually.
- 3. The app will automatically classify it as Safe, Suspicious, or Dangerous.
- 4. Tap "Tap for live AI analysis" for a detailed AI-powered breakdown.
- 5. View trigger keywords highlighted in the message.

6. Link Checker

The Link Checker allows you to verify any URL before clicking it. Paste any link to instantly detect phishing, malware, and scam websites.

How to Check a Link:

- 1. Tap "Links" in the bottom navigation bar.
- 2. Paste the URL in the text field.
- 3. Tap "Analyze with AI" button.
- 4. View the result — Safe, Suspicious, or Dangerous.
- 5. Read the detailed reasons and recommendations provided by AI.

What the App Detects:

- Suspicious domain extensions (.tk, .ml, .xyz, .top)
- URL shorteners hiding real destinations
- Raw IP addresses used instead of domain names
- Phishing keywords in URLs (verify, secure, login, confirm)
- Known scam website patterns

7. Secure Vault

The Secure Vault is a biometric-protected storage for your sensitive financial credentials. All data is encrypted and can only be accessed with your fingerprint, Face ID, or vault PIN.

What You Can Store:

- Bank PIN
- ATM Card numbers
- Email passwords
- Recovery codes
- Any custom credentials

How to Use the Vault:

1. Tap "Vault" in the bottom navigation bar.
2. Tap "Unlock" and authenticate with fingerprint/Face ID/PIN.
3. View your stored credentials.
4. Tap "+ Add New Credential" to add new items.
5. Tap the eye icon to reveal hidden values.
6. The vault auto-locks when you leave the screen.

■ ■ **Security Warning:** Never share your vault PIN or biometric data with anyone. FraudShield AI staff will never ask for your credentials.

8. Emergency Freeze

The Emergency Freeze feature allows you to instantly block all financial activity linked to your account when you suspect fraud or if your card is lost or stolen.

When to Use Emergency Freeze:

- You suspect unauthorized access to your account
- Your ATM card is lost or stolen
- You accidentally shared your OTP or PIN
- You notice suspicious transactions
- Your phone is lost or stolen

How to Activate Emergency Freeze:

1. From Home Dashboard, tap "Emergency Freeze" (red button).
2. A confirmation dialog will appear.
3. Tap "Freeze Now" to immediately block all financial activity.

4. The screen will turn red showing "ACCOUNT FROZEN".
5. To unfreeze, tap "Unfreeze Account" at the bottom.

9. Settings

Setting	Section	Description
SMS Monitoring	Protection	Auto-scan all incoming SMS messages for threats
Auto-Scan Links	Protection	Automatically scan URLs copied to clipboard
Fraud Alerts	Protection	Receive push notifications when threats are detected
Biometric Lock	Security	Use fingerprint or Face ID to unlock the vault
Change Vault PIN	Security	Update your vault access PIN
Clear Scan History	Security	Delete all previous scan records
Dark Mode	General	Switch between light and dark theme
Language	General	Switch between English and Urdu (■■■■■)
About FraudShield	General	View app version and information

10. Troubleshooting

Problem: SMS Scanner not detecting messages

Solution: Ensure SMS permission is granted in phone Settings > Apps > FraudShield AI > Permissions > SMS.

Problem: AI Analysis not working

Solution: Check your internet connection. AI analysis requires an active internet connection to contact the server.

Problem: Biometric authentication failing

Solution: Go to Settings > Biometric Lock and disable/re-enable it. Make sure fingerprints are registered in your phone settings.

Problem: App crashing on startup

Solution: Clear app cache from phone Settings > Apps > FraudShield AI > Storage > Clear Cache, then restart the app.

Problem: Emergency Freeze not responding

Solution: Force close the app, reopen it, and try again. Ensure internet connection is active.

Problem: Notifications not appearing

Solution: Go to phone Settings > Apps > FraudShield AI > Notifications and ensure notifications are allowed.

11. Privacy Policy

Data Collection:

FraudShield AI only processes SMS content and URLs that you explicitly submit for analysis. No data is stored on external servers permanently.

AI Processing:

Messages and URLs sent for AI analysis are processed by OpenAI's API and are subject to OpenAI's privacy policy. Analysis data is not linked to your identity.

Local Storage:

Vault credentials are stored locally on your device using encrypted secure storage. They are never transmitted to any server.

Permissions:

SMS permission is used only for scanning messages within the app. The app does not send your SMS messages to any third party.

Analytics:

No personal analytics or tracking data is collected by FraudShield AI.
